

IMS Packaging Services

Whichever Systems Management tool is used in your environment, having an optimized packaging solution for automating the distribution of software is pivotal toward achieving a level of maturity that supports IT business objectives.

Whether the requirement is to safely deploy applications en-masse across large and distributed environments or simply supporting the Service Desk with enhancing first line call closure rates for requested and authorized applications; the concept of having a reliable, high-value, high-quality packaging solution is critical.

Q: How can your organization acquire conflict free, deployable, optimized software packages whilst avoiding the common pitfalls associated with repackaging software?

A: NetworkD Infrastructure Management Services (IMS) Packaging Service

In order to achieve any level of Systems Management Maturity from an Application Management perspective, a Best of Breed packaging capability is pivotal; the industry standard is MSI.

NetworkD IMS offers a high-quality, highly competitive packaging interface with our partners in order to meet the needs of large and small organizations alike. We recognize that regardless of the size of the organization, the concept of 'Software Packaging' remains a requirement often differing by volume alone.

Our packaging team consists of a structured group of highly experienced engineers whose values are fully aligned with that of the NetworkD core business. With years of packaging experience, we combine the efficiency and expertise of our specialized global software packaging team with the responsiveness of your own engineers.

IMS Packaging Service Benefits

- Best Practices – We make a point of recognizing precisely what 'Best Practices' in this area represent and integrate them into our model.
- Knowledge and Capability – Comprehensive Windows Installer knowledge and capability.
- Resource Capability – Highly experienced resources resulting in the most cost efficient delivery.
- Exploited Toolsets – Best of Breed packaging toolset and Systems Management toolset for all levels of testing and quality assurance.
- Streamlined Release Procedure – All packages are deployment tested immediately prior to release allowing for simple integration into the Systems Management toolset and associated functionality.
